# We take some quick looks at the headlines

Surfing the net on Saturday morning, I found where the Federated States of Micronesia made MSN's top ten list of "Delicious places to dip into diving."

The write-up included descriptions of Chuuk, or Truk as they call it, Pohnpei and Yap.

This isn't exactly news for Kwaj divers, certainly not the veterans who have traveled with mask, fin and snorkel, but it's always interesting to see how the world views our back yard.

Joining the FSM on the list were Fiji; Indonesia; Baja, Mexico; Kona, Hawaii; Cayman Islands; Bahamas; Australia; the Galpagos; and, of all places, Cuba, which is still technically off-limits to U.S. travelers.

Now on to sports, one also notes

## Letters to the Editor

To submit a letter: Keep letters to less than 300 words, and keep comments to the issues. Letters must be signed. We will edit for AP style and, if you exceed the word limit, space. Limit one letter every 30 days.

### The Kwajalein Hourglass

Commanding Officer ...Col. Jerry Brown  
Public Affairs Officer ...LuAnne Fantasia  
Editor .....Jim Bennett  
Graphics Designer.....Dan Adler  
Reporter .....Jan Waddell  
Circulation ..... Jon Cassel  
Intern..... Krystle McAllister

The *Hourglass* is named for the insignia of the U.S. Army 7th Infantry Division, which liberated the island from the forces of Imperial Japan on Feb 4, 1944.

The Kwajalein *Hourglass* is an authorized publication for military personnel, federal employees, contractor workers and their families assigned to USAKA. Contents of the *Hourglass* are not necessarily official views of, or endorsed by, the U.S. Government, Department of Defense, Department of the Army or USAKA. It is published Tuesdays and Fridays in accordance with Army Regulation 360-1 and using a network printer by Kwajalein Range Services editorial staff, P.O. Box 23, APO AP 96555.

Phone: Autovon 254-3539; local 53539.

Printed circulation: 2,000

where injured Cubs pitcher Mark Prior has been tagged by former pitcher Jack McDowell as possibly a steroid-user. McDowell asserts that his injuries, or lack of timely healing, could have resulted from their use. Prior denies the charge.

The problem with steroid use in major league baseball, and with the recent federal case involving alleged steroid suppliers, is that now just about every injured player will be a suspected steroid-user. And as rampant as steroid use might be, there are simply too many injuries in the sport to associate all of them with drug use.

But this is a problem the league and the players have brought upon themselves with a lax testing policy that pales in comparison to just about every other professional sport and the Olympics.

In Royal news, English paper, *The Sun*, published pictures of Prince William, 22, with a girlfriend on the ski slopes at a Swiss resort, thus violating

an agreement between the Royal family and press. Under the agreement, the press will leave William and Prince Harry alone, except for some approved photo shoots, every so often. The two young men had appeared for shots earlier in the ski vacation.

For the record, the *Hourglass* has not violated the agreement, and any time the Royal family wants to invite us to a Swiss ski resort, and in our case, foot the bill, we'll be putting in the TDY paperwork.

New terror threats daily, political fencing in America and the war in Iraq — I guess it's no wonder I find myself drawn to sports pages and celeb-news.

Unfortunately, the sports pages are reading more like my old cop beat, and the celeb-news reads like the Kwaj rumor mill on a Hollywood-global scale.

What's a guy to do?

Reading is an option, if you ask the members of the Hardback Hussy Book Club, a group of Kwajalein ladies who gather monthly to discuss a variety of literary works.

According to the e-mail we received, they number a dozen from various walks of life, enjoy a wide range of offerings from the heavy to pulp fiction and like Oprah Winfrey. Happy reading ladies, and please let me know if Oprah plans a visit.

## CYS hosts GPS scavenger hunt

By David Waddell

Guest writer

Sure, everyone has been on a scavenger hunt at least once in his or her lives, but with the Global Position Satellite unit?

In events sponsored by Child and Youth Services, several kids met at the youth center this week to do just that.

Tuesday, CYS offered a one-hour class in preparation for the scavenger hunt. During the class, participants learned how to use a GPS unit and got a chance to play around with it, plotting various points on the island.

Participants then met Wednesday at the youth center for a one-hour scavenger hunt. They were given the rules and boundaries that included everywhere north of the airport. They were put into teams, making sure at least one person had attended the previous GPS class.

The teams were then sent on their different paths with their bikes, a GPS unit and a set of coordinates that led to one of 10 clues with a question that pertained to the location and a new set of coordinates.

"I had fun and learned a lot of interesting facts," said Kendal Young.

To make sure each team obtained their clue and not another team's, each had their own color.

"It was kind of hard, but overall fun. I would like to do it again," said Chris Berlind.

The clues were located in not so obvious places such as the ATM outside the Bank of Guam, on the sides of palm trees, and on the backs of signs.

"It was hot and fun," said Maria Geeslin.

When each team returned to the youth center, the answers to the various questions were checked. If a team got any wrong, they were sent back out to find the right one.

Participants earned various prizes. Participants could choose from lawn chairs, skateboards, coolers, puzzles or bungee cords.

## Youth travel to Meck for tour

By Krystle McAllister

Hourglass Intern

April Fool's Day had more in store for a group of 12 students than simple a trip on a catamaran.

The Child and Youth Services program put together a special trip to Meck for students during their spring break.

CYS staff Erica Coppage, technology specialist, and Heather Schantz, assistant youth director, met the kids at the dock security checkpoint at 12:45 p.m. to check in and board the Jelang-K catamaran. Capt. Keith Brown greeted everyone into the ship, and cast off toward Meck.

In the sitting area, kids occupied themselves with conversation, card games, and music. Others found their way to the wheelhouse, where Brown pointed out important features of the ship. He showed the kids points on the radar and how much further they had to go. The weather was stormy, and ocean swells high, so everyone outside got soaked.

Once they got there, they were taken to the conference room where Steve Thelin, Boeing site manager for the GBI, gave a presentation on what it takes to build and launch a rocket. Thelin then showed a video telling about what it takes to launch and intercept a missile. He talked about the first, second and third stages of the rocket, and how the second and

third stage eventually are blown-off the rest of the rocket using a form of TNT, which helps the rocket to battle against gravity.

The kids learned about orbits and the GBI system, in general.

The rockets are shipped to Kwajalein, and eventually Meck in pieces, where the crews in the Missile Assembly Building assemble the rocket. A special chamber, called the Clean Room, has special air protection to filter the air so as not to get dust and unwanted particles on the \$20 million optics and equipment.

"He was very enthusiastic, and I liked that," said Maria Geeslin junior in Kwajalein Jr./Sr. High School.

Thelin also talked about the Flight Termination System, which is a lot like a self-destruct program. Many places in the range, including Meck and Kwaj, can engage the FTS, if warranted for safety reasons.

Afterwards, he answered questions about the rockets, and the kids were led back to the boat for the return trip shared with workers returning home from the island.

"I loved the catamaran trip and the fact we got to sit where the dignitaries sit," said Kendal Young, sophomore in Kwajalein Jr./Sr. High School. "[It was] something I never would've been able to do stateside."

# NASA plans Kwaj test and model rocket launch

By Jan Waddell  
Reporter

The NASA Wallops Equatorial Ionospheric Studies II, or EQUIS II, program will launch 14 sounding rockets from Roi-Namur during August and September and offer educational outreach projects for Kwajalein students.

"We have been packing hardware, rocket parts and equipment for the first shipment to go out in the next two weeks," said Betty Flowers, public affairs specialist, NASA Wallops Flight Facility. "NASA personnel will begin arriving around July 7 with a full complement of NASA, contractor and science folks in place on Roi by the end of July. The launch window extends from the first of August to the end of September. However, we would like to have all operations complete by mid-September."

At the Kwajalein Jr.-Sr. High School EQUIS II presentation in March, John C. Hickman, project manager for the EQUIS II project, provided an overview of the EQUIS Mission.

He explained the rockets can take less than two years from the time of "inception to the time it is launched."

NASA Wallops scientists will use sounding rockets to measure different phenomena in the atmosphere with each launch scheduled to last between 5-15 minutes. Sounding rockets travel approximately 180 miles to 900 miles into the upper atmosphere with payloads from 40-100 pounds depending on what the scientists intend to measure.

The missions will study disturbances in the ionosphere and, since it is most active at the magnetic equator, Kwajalein Atoll is the ideal location. The scientists are looking for ionosphere storms to monitor.

"When scientists see what they are looking for, then we will launch," Hickman said. "We launched from Kwajalein in 1990, and had six very successful launches."

"Our team will be working days and nights, given that 12 of the 14 rockets will be launched at night,"

Flowers said.

The launches from Roi-Namur will carry sky-dye and various instrumented payloads.

The sky-dye cloud is visible for 200-300 miles around Kwajalein Atoll for about 15 minutes. Cameras will be set up on Likiep, Bikini, Rongelap and Roi-Namur to film the dye-cloud. The dye detects particles in the ionosphere and the instrumentation documents the activity.

Scientists from NASA Goddard Space Flight Center, Clemson University and Cornell University will study energy disturbances in the upper atmosphere and Dr. Miguel

One outreach project NASA Wallops' personnel talked with the students and faculty about was a model rocket building and launch competition.

NASA Wallops will provide about 12 model rockets to the school along with motors. Each rocket is around 32 inches tall and will travel around 2,000 feet into the air. High school students will form groups to design and build the model rockets.

Students will also have the ability to use software to effectively analyze the stability and altitude, if launched, of the rockets they design.

The student groups will then compete against each other and test their ability to skillfully design and build model rockets along with predicting the rockets flight and stability.

The winning group of students might be able to view a day-launch on Roi and talk with the scientists involved with the NASA Wallops launches, said Glenn Maxfield of NASA Wallops school outreach program.

"We are still pursuing doing a model rocket demonstration for all the Kwaj students during the second week of school," pending approval, Flowers said, adding other programs are still in the planning stages.

"As far as other specific outreach programs, making

concrete plans at this point is very difficult. We'll be working very closely with school administrators and teachers to schedule visits or programs. All of which will be dependent on our launch schedule and the availability of our people at a time that is also convenient to the school schedule," Flowers said.

Maxfield also spoke with the students about career fields with NASA.

"There is a shortage of Aerospace engineers right now," he said.

He advised students to have strong speaking skills, the ability to communicate in writing, good study habits and develop a plan for their future.

Larsen, of Clemson University, serves as the chief scientist for the campaign, Flowers said.

According to Larsen, the scientists want to study the phenomenon to better understand it.

The NASA Wallops personnel will also work with Kwajalein school personnel to provide Kwaj students with some unique opportunities.

"Education and outreach is very important to NASA, and our employees genuinely enjoy working with kids of any age," Flowers said. "The group we have coming to Kwaj is just terrific with children and more than willing to share with them the excitement of launching rockets and what can be learned from the launches, from engineering and science to astronomy."

# Of pigs and seaplanes: Ebeye during the war years

By Eugene Sims  
Kwajalein Historian

For most Kwajalein residents who arrived on island any time after 1951, that little island three miles up the way from Kwajalein called Ebeye was thought to have been home for the Marshallese since, well, ever and ever.

Very few people know how much importance that bit of real estate played during and immediately after World War II. They also probably would never know one of the funnier stories that came about immediately after the invasion of the Marshalls in February, 1944.

One day before Kwajalein was finally wrested back from the Japanese on Feb. 4, 1944, the island of Ebeye, or Ebeje, code-named Burton, was also captured by the Army's 17th Regimental Combat Team. After a fierce, two-day fight that wounded 82 men and cost seven American lives, U.S. forces finally took over the island.

The two American landings on Ebeye started on the southern lagoon end of the island. As fighting progressed north, the American troops reported seeing many Japanese running wildly around various parts of the island structures.

As one platoon leader later reported, "It looked like the [Japanese] were running around on all fours. We couldn't figure out how they could run so dang fast, darting in and out from behind stumps of trees, collapsed buildings and concrete bunkers."

What the Americans learned after the island was secured was that the four-legged creatures weren't Japanese low-crawling, but really pigs.

It seems the Japanese had used Ebeye as the site for a small pig farm. The animals that survived the earlier

(Photo by L.F. Miller, courtesy of the author)

**The color guard stands at attention during Ebeye's commissioning ceremony in 1944.**

Navy bombardment had broken out of their pens and were running around the island in a maddening frenzy.

Now the story didn't end there.

Someone decided that the island wasn't really under control until the pig population was rounded up and put back in pens. Word went out through all the troop commanders asking for men who might have experience handling or, at least, collecting pigs.

I've listened to many versions of this story at WWII veterans' reunions over the years and it seems the tales get more wild than the previous year's stories. As best as I can find out, one company of soldiers, about 120 men, were required to finally round up the hogs. An urgent order also went out to one of the Navy Seabee battalions to hurriedly build or repair hog pens on Ebeye. This had to be done on a priority basis ingoring most all the other work on the island.

One veteran told me, "The task of getting them hogs penned up was harder than getting rid of the [Japanese]. At least it took a lot longer and them four-legged little monsters was a lot meaner, too. Spooky. Lawd, they was spooky."

The question has always been asked about the eventual disposition of the pigs after they were finally contained. One story related how the officers mess on Kwajalein suddenly offered pork

roast and pork chops for three nights running.

Another, older Seabee veteran told me, "On Ebee we really lived high on the hog for awhile!"

Another story from a Navy Seabee chief of that era told me how a couple of enterprising Navy men stole several of the pigs in the dead of night and took them off to some nearby island. It seems they had plans to start another pig farm and sell the product back to the highest bidder. I never heard how their adventure ended except when my Navy demolition group was working on most of the islands near Kwajalein in 1945, we sure didn't find any pigs!

I've often suspected that maybe some of the original hogs from Ebeye might have relatives over on Ennylabegan or even Roi-Namur?

Since the Japanese used the 76-acre coral spit as a seaplane base, it seemed only natural the Americans might continue to use the island for the same purpose. The 300-foot concrete seaplane ramp was thought to be in usable condition along with the concrete and coral block pier. The two structures were both repaired by the 601st Navy Seabee Battalion that was stationed on Ebeye. Much of the old seaplane ramp at the north end of the island remains today.

Almost overnight, American GIs began to get orders to report to some

## Ebeye became base ...

(From page 5)

place called Ebeye. Somehow, the fresh recruits began to call the island "Ebee" and to this day, most of the veterans of those years still call Ebeye, Ebee.

The name Ebeye is also in error as revealed in my book, "Kwajalein Remembered." The "Y" in Ebeye should have been a "J," but Navy cartographers miscopied the name when new maps or charts were drawn, prior to the invasion.

In mid-1944, the Navy needed a good place to set up the fleet communications center, so that Commander in Chief of the Pacific, Adm. Chester Nimitz, who was in Hawaii, could relay messages to the Allied forces operating throughout the Pacific Ocean. Also, a ComNAV Gilberts/Marshalls office was required for the new naval commander, Rear Adm. Burnhart.

Real estate on Kwajalein was pretty much in a state of flux since the island was being turned upside down while the Army engineers and Navy Seabees built roads, a runway and a whole series of new structures. Ebeye, three miles to the north seemed a little quieter, and certainly more settled, so the Navy moved in.

It should be noted that no Marshallese families were living on Ebeye during this period, 1944-47. By the end of 1944, the island had been bulldozed of all Japanese bunkers and at the head of the original seaplane ramp, a new concrete hangar and parking area became home to a host of Navy seaplanes.

Throughout the remaining war years, the Navy continued daily air patrols using PBM, PB4Y and PB4Y seaplanes. Sometimes, the aircraft were used to ferry combat Marines or Army forces to smaller islands where a few Japanese still remained.

The story of Ebeye would not be complete without noting that much of the continued war strategy for the Pacific Theater was planned during frequent visits by Nimitz and his staff officers as they met with various other military leaders.

Another very important part of Ebeye real estate was used for the Coast Guard Loran A station built to replace the first station built on Kwadack Island in 1944. The Coast Guard operated the Loran A station on Ebeye until the mid-1970s.

Gone are most of the war relics and the Americans who worked and lived on Ebeye, but the memories still remain — more so the stories about the pigs.

# Army tests flight ops from high-speed water vessel

## From Army News Service

More than 30 years have passed since the last Army helicopter landed onboard an Army ship, but Army aviators began a new chapter in history March 25 when they landed two UH-60 Black Hawk helicopters aboard a new test vessel in the Yellow Sea.

The Black Hawks, assigned to Company B, 1st Battalion, 52nd Aviation Regiment, 17th Aviation Brigade, landed at 10:57 a.m. Korean Standard Time aboard the USAV Joint Venture X1 off the coast of Pyongtaek.

The ship visited Kwajalein in July 2002.

The helicopters offloaded passengers onto the deck of the ship, and

then performed deck landing certification operations, which consists of each pilot landing on the deck of the vessel five times.

"This is awesome having Army aircraft landing on an Army vessel," said Lt. Col. Steven Boylan, Public Affairs officer for 8th U.S. Army.

Although this landing was historically significant, future deck landings aboard Army vessels is uncertain. The Army currently has no watercraft in its permanent inventory capable of supporting flight operations. The Joint Venture is the first of two military-leased modified high-speed catamarans being tested as part of the Army's Transformation plan.

It is possible that this ship, and others like it, may find their way

into the permanent inventory, which would give the Army the capability to rapidly move troops and equipment into previously inaccessible areas.

The ship stationed in Hawaii under the command of U.S. Army Pacific, was in the Korea theater of operations to support the Reception, Staging, Onward Movement and Integration exercise, that runs from March 21 to 29 throughout the peninsula.

The Army's last deck landings occurred during the Vietnam War, when USNS Corpus Christy Bay was used as a helicopter maintenance ship. The Corpus Christy Bay was a U.S. Navy ship recommissioned by the Army in the mid-1960s and retained the USNS portion of its name.

## Weather

Courtesy of RTS Weather

**Tonight:** Partly cloudy with a slight chance of showers.

**Winds:** Northeast to east at 15-20 knots, with occasional higher gusts.

**Tomorrow:** Partly cloudy with a chance of showers.

**Winds:** Northeast to east at 16-22 knots, with higher gusts near showers.

**Temperature:** Tonight's low 80°  
Tomorrow's high 87°
